M.S. in Economics & Policy Analysis

Learning Outcomes

Graduates will:

- Be able to apply modern economic theory, use analytical and evaluative skills to solve a variety of policy problems and make recommendations and decisions.

- Have the ability to employ existing econometric software programs to solve complex problems in policy analysis.

- Understand the main theories of international trade and will apply them to relevant international trade policy issues.

- Be able to create clear and coherent written work that is geared towards different audiences including economists, non-economists, policy makers and general public.
