M.S. in Supply Chain Management

Learning Outcomes:

- Students will demonstrate that a supply chain decision involving people or technology was made in a context of the multiple functions of the business.

- Students will evaluate whether a supply chain decision has properly linked employee or company experience to the action.

- Accepting as given that time is essential in supply chain decisions, students will provide evidence that delivery of a product to a customer was done promptly.

- In an analysis of the organizational structure of the firm students will present evidence that resources are properly priced or rewarded.

- Students will develop a governance and operation structure that assures that sustainability was considered in the decision making.

- Students will be able to demonstrate to potential customers that the firm’s solutions are innovative.
