B.S. in Registered Nurse (RN)

Learning Outcomes

Students will be able to:

- Apply nursing concepts, theories, and research to a family-centered and community-based practice of professional nursing care and case management.

- Explore the philosophies of professional nursing in the context of its history and its evolution as a discipline.

- Demonstrate appreciation for the diversity and harmony of each unitary human being in mutual process with the environment.

- Contribute to excellence in health promotion and disease prevention through evidence-based professional practice, ethical care management, and effective patient teaching.

- Assume responsibility for a collaborative role within the health team and the profession for safe, effective and affordable health care with individuals and families.

- Demonstrate independence and personal accountability for self-directed personal and professional development as a registered nurse.

- Use professional codes and standards as a basis for professional nursing practice and service to a multicultural society.

- Use information technology in professional nursing practice.
