Master’s in Public Health

Learning Outcomes

Graduates can:

• Assess health resources and identify health needs of different communities.

• Describe the occurrence and distribution of health and illness (e.g. psychological, behavioral, environmental, genetic) within different communities.

• Design, implement, and evaluate community-based interventions that serve to improve health.

• Practice and apply culturally sensitive research tools and methods to improve the health of diverse communities.

• Develop and sustain collaborative relationships with community partners.

• Analyze and integrate the role of policy and advocacy for public health in the community and country as a whole.
