Learning Outcomes
Masters in Public Health

Graduates can:

1. Assess health resources and identify health needs of different communities.
2. Describe the occurrence and distribution of health and illness (e.g. psychological, behavioural, environmental, genetic) within different communities.
3. Design, implement, and evaluate community-based interventions that serve to improve health.
4. Practice and apply culturally sensitive research tools and methods to improve the health of diverse communities.
5. Develop and sustain collaborative relationships with community partners.
6. Analyse and integrate the role of policy and advocacy for public health in the community and country as a whole.
