

ENV 101—Introduction to Environmental Science

Fall quarter, 2009

Logistics

Dr. Mark Potosnak

mpotosna@depaul.edu

McGowan South 203F, Lincoln Park Campus

773-325-7867

Office hours: Monday & Wednesday 9:30–10:30 am or by appointment

Textbook (required): *Essential Environment*, 3ed, Withgott & Brennan, ISBN 978-0-136-04531-6

iClicker (required): Purchase at bookstore and bring to every class meeting (see attendance policy).

Course overview

The primary goals of this course are (1) to provide you with the intellectual tools to evaluate the environmental challenges that our society faces and (2) to understand the methods and processes that scientists employ to advance human knowledge. Drawing on the disciplines of biology, ecology, chemistry and physics, we will explore the how human activities impact the natural environment and in turn how modern society depends on ecosystem services. We also will focus on policy responses to current environmental issues and consider several case studies where regulation led to problems being 'solved.' Our discussion will be guided by considering the four earth spheres (atmosphere, hydrosphere, lithosphere and biosphere) and the interrelationships (i.e., material and energy cycles) between each and humans. In each instance, we will employ a geographical perspective to understand how different human impacts span local, regional and global spatial scales. Please also note the expected learning outcomes below.

Course philosophy

We will strive to have an interactive discussion on the topics addressed in this class. One lesson of environmental science is the impact that each of us has on the environmental sustainability of our planet, and the diverse student population at DePaul will help us to understand how different ways of living (e.g., urban versus suburban) change this impact. Also, science is very difficult to learn passively; classroom discussion promotes active learning. We will also use iClickers (see below) to foster an interactive learning environment.

Policies

Academic Integrity: According to the DePaul University [Student Handbook](#), "Violations of academic integrity include but are not limited to the following categories: cheating; plagiarism; fabrication; falsification or sabotage of research data; destruction or misuse of the university's academic resources, alteration or falsification of academic records; academic misconduct; and complicity." The Handbook also states that, "If an instructor finds that a student has violated the Academic Integrity Policy, the appropriate initial sanction is at the instructor's discretion." To support this policy, your assignments

may be submitted to the website turnitin.com. For more information, definitions, and examples, see DePaul University's Academic Integrity website at <http://academicintegrity.depaul.edu>.

iClickers/quizzes: The iClicker system will be used to take attendance, provide feedback during lectures, and for quizzes. Every Monday, the class will start with a short quiz (approximately 5 questions/10 minutes) based on assigned reading for that week. Completion of this quiz will also count as attendance for that class. On Wednesdays, questions will be peppered throughout the lectures. Although these questions will not be graded, they must be completed to receive credit for attendance. Since the iClicker system is relatively new, we may collectively decide to make modifications to this system.

Class mid-quarter evaluation: As a new faculty member at DePaul, I am particularly interested in student feedback. In addition to the standard end of the quarter evaluation, I will conduct a mid-quarter evaluation to look for ways to improve both the content and delivery of this course. Also, I will focus on your evaluation of the iClicker system and the electronic submission of the footprint exercises.

Blackboard: In an effort to reduce paper usage, all class materials and grades will be available on the Blackboard site. I will post all lectures on the Blackboard site within 24 hours after the class. We will also use Blackboard for all assignment submissions.

Attendance: Attendance is required for all classes. Students will be allowed to miss two classes without penalty during the quarter. This will be implemented by dropping the two lowest grades on Blackboard for attendance/quizzes. This should cover all 'routine' absences such as colds, doctor appointments, etc. Further excused absences will only be granted in exceptional circumstances with appropriate documentation. After your first two absences, about 1 point for each missed class will be taken off your final grade, and an additional 1 point if a Monday quiz is missed. The footprint exercise is still due Thursday regardless of class attendance. Attendance will be taken using the iClickers (see below). Exams must be taken at the scheduled time. Any exceptions to this policy must be arranged in advance (e.g., athletic competitions).

Late assignments: All assignments are due online at 11:59 pm on Thursday. Late assignments will receive a 10% per day grade penalty (i.e., within 24 hours = -10%, within 48 hours -20%, etc.). All assignments must be turned in electronically via blackboard.

Ecological footprint exercises

All homework will be based on the Calculating Ecological Footprints exercises at the end of the book chapters. The final project will involve graphs and the details will be presented towards the end of the quarter. This quantitative project also serves to fulfill the requirements of the Scientific Inquiry quantitative requirement.

Grading

Grades in this class will be determined on the following scale:

>=93	92-90	89-87	86-83	82-80	79-77	76-73	72-70	69-67	66-60	<60
A	A-	B+	B	B-	C+	C	C-	D+	D	F

I may change these grade boundaries, but this will always be in favor of the students and will be applied uniformly to the entire class. Grades will be determined from the individual components of the course by the following allocation:

Final exam	Midterm exam	Homework	Quizzes	Attendance
25%	20%	25%	10%	20%

Sources of help

If you think you may have special learning needs, please feel free to see me as soon as possible, and every effort will be made to reasonably accommodate your needs.

- **PLuS Program:** for students with learning disabilities and/or attention deficit disorders
- **Writing Center:** for students who need help with writing
- **OSD:** for students with physical disabilities
- **Dean of Students:** accommodations with health or family emergencies

Scientific Inquiry domain

Courses in the Scientific Inquiry domain are designed to provide students with an opportunity to learn the methods of modern science and its impact on the world around us. Courses are designed to help students develop a more complete perspective about science and the scientific process, including: an understanding of the major principles guiding modern scientific thought; a comprehension of the varying approaches and aspects of science; an appreciation of the connection among the sciences; the fundamental role of mathematics in practicing science; an awareness of the roles and limitations of theories and models in interpreting, understanding, and predicting natural phenomena; and a realization of how these theories and models change or are supplanted as our knowledge increases.

Goals and Learning Outcomes

Below are listed the learning goals and outcomes for the Science Inquiry Domain. Each goal is listed followed by learning outcomes associated with the goal. Most of this document conforms to the National Science Education Standards.

1. Students will understand the major principles guiding modern scientific thought. Students will demonstrate a mastery of the science content knowledge of their SID courses.
2. Students will know that science, technology, and math serve as mechanisms for inquiry into the nature of the universe.
3. Students will understand and appreciate the interrelationships among science, technology and math.
4. Students will understand and appreciate the role of science in society and in their lives.
5. Students will understand the nature of science, technology, and mathematics.

Upon completion of this class, you will be able to (class-specific learning outcomes):

- Explain what environmental science is.
- Describe science as a process and the methods of modern science.
- Describe the interdisciplinary nature of environmental science and its major concepts and theories.

- Using a systems approach:
 - Describe the four major components of the earth's realms and their interrelationships.
 - Describe the fluxes of energy and matter between these cycles.
- In the laboratory, apply methods of modern science to real environmental issues.
- Be able to describe the scientific basis of the major environmental issues facing society today.
- Describe the impacts of contemporary human activities on the earth's processes.

Syllabus

Week—Dates	Topic	Reading/quiz (due Mon)	Footprint exercise (due Thu)	Notes
1—Sep 9	Introduction	Chapter 1*	None	*No quiz
2—Sep 14–16	Environmental policy	Chapter 2	Chapter 2	
3—Sep 21–23	Science fundamentals	Chapter 3	Chapter 3	
4—Sep 28–30	Ecology	Chapter 4	Chapter 4	
5—Oct 5–7	Human Population	Chapter 6	Chapter 6	
6—Oct 12–14	Biodiversity	Chapter 8*	None	Midterm exam (Oct 14); *no quiz
7—Oct 19–21	Land use	Chapter 9	Chapter 9	
8—Oct 26–28	Atmospheric science	Chapter 13	Chapter 13	
9—Nov 2–4	Global climate change	Chapter 14	Chapter 14	
10—Nov 9–11	Nonrenewable energy	Chapter 15	Chapter 16	
11—Nov 16	Renewable energy	Chapter 16	Final project	

The above schedule is a framework, and changes will be communicated in class and via the Blackboard site.

Class times: Monday & Wednesday 8:00–9:30 am

Class location: McGowan South Room 206

Final exam: Wednesday, November 18th, 8:45–11:00 am
